## Executive Summary

State and local tax systems in the United States are widely diverse. The District of Columbia and the 50 states employ a broad range of taxes and fees to fund state and local government operations. The combination of taxes and fees utilized by a particular jurisdiction is dependent upon many factors, including revenue needs, the tax base of the local government, the fiscal relationship between the state and local governments, constitutional limitations in some states, and the level of local government services demanded by residents.

The District's tax structure employs taxes typically used by local governments, such as real and personal property taxes, deed taxes, traffic fines, and others. At the same time, the District has taxes usually associated with the state level of government, such as the income tax, estate tax, sales and use taxes, excise taxes, gross receipts taxes, and motor vehicle-related taxes. About two-thirds of the District's generated revenues come from taxes usually administered by the states.

The state and local tax rates of individual taxpayers vary from one jurisdiction to another. For example, all 51 cities in this study levy a tax on real property located within the city, yet effective tax rates range from a high of $\$ 3.39$ per $\$ 100$ of assessed value in Detroit, Michigan, to $\$ 0.01$ per $\$ 100$ of assessed value in Birmingham, Alabama, and Las Vegas, Nevada (Table 4, page 19). In addition, several jurisdictions allow tax exemptions, credits and caps in the calculation of the real property tax liability (Table 6, page 21). The District of Columbia has a $\$ 69,100$ homestead deduction in FY 2013 for owner-occupied residences as well as other credits. In FY 2013, the Class One property tax rate for the District is $\$ 0.85$ per $\$ 100$ of assessed value; and the owner-occupied residential real property tax cap is 10 percent.

As noted in Table 7, page 23, residents in 46 of the 51 cities studied are subject to some form of sales and use tax. The highest combined sales tax rates are found in Memphis, Tennessee; Birmingham, Alabama; Columbia, South Carolina; Seattle, Washington; Chicago, Illinois; Los Angeles, California; and New Orleans, Louisiana. Residents of Washington, D.C.; Milwaukee, Wisconsin; Portland, Maine; Virginia Beach, Virginia; and Honolulu, Hawaii pay the lowest combined sales tax rates.

Table 9, page 26, indicates that residents in all 51 cities in this study pay some type of automobile registration fee or tax -- usually either a flat rate per vehicle or by weight of vehicle. In addition, personal property taxes on automobiles are levied in 12 of the cities.

Residents in 44 of the 51 cities in this study are subject to some type of individual income tax at the state and/or local levels (Table 3, page 16). There are several types of individual income tax systems, including graduated state and local rates, graduated state and flat local rates, flat state and local rates, graduated state tax rates, and flat state rates with exemptions.

There is no single pattern that characterizes either a high or low tax burden city. Details concerning the various taxes levied and why the tax burdens differ from one jurisdiction to another are presented in this publication. Part I of this publication compares selected tax burdens in the District of Columbia with those of the most populous city in each state, through December 31, 2013. Part II of this publication contains a compendium of tables that illustrate the tax rates in the District of Columbia and the 50 states for 12 different types of taxes as of January 1, 2014.

## Acknowledgment

Each year the Government of the District of Columbia, Office of the Chief Financial Officer, Office of Revenue Analysis publishes several reports to provide information to the citizens and taxpayers of the District of Columbia about the tax rates of states and large cities. The reports contain information about the rates and burdens of major taxes in the District of Columbia compared with states and the largest city in those states.

This publication contains two reports: (I) Tax Burdens in Washington, D.C. Compared with Those in the Largest City in Each State, 2013 and (II) A Comparison of Selected Tax Rates in the District of Columbia with Those in the 50 States as of January 1, 2014. This information is requested annually by committees of the U.S. Congress and the District of Columbia Council. It is provided pursuant to Public Law 93-407.

Correspondence concerning "Tax Rates and Tax Burdens in the District of Columbia - A Nationwide Comparison" should be addressed to: Lori Metcalf, Ph.D., Fiscal Analyst, Economic Affairs Administration, Office of Revenue Analysis, $11014^{\text {th }}$ Street, SW, Suite W770, Washington, D.C. 20024, telephone (202) 727-7775.

Appreciation is extended to the many state and local officials in various state offices who responded to our state survey and provided data and responded to follow up inquiries. Their cooperation in providing information and their helpful suggestions make this publication possible. I would also like to thank Lori Metcalf, who prepared this document, and Bob Zuraski, who offered a keen eye in the editing process. Further, I would like to thank Divya Woden and Naina Woden for their helpful research assistance.

## Part 1

Tax Burdens in Washington, D.C.
Compared with Those in the Largest City in Each State

## 2013

## Overview

There is a wide diversity in state and local tax systems in the United States. The fifty states and the District of Columbia employ a broad range of taxes and fees to fund state and local government operations. The combination of taxes and fees utilized by a particular jurisdiction is dependent upon many factors, including its revenue needs, the local government tax base, the fiscal relationships between the state and the local government, constitutional and legal limitations on the powers of taxation, and the jurisdiction's philosophy of government taxation.

The District's tax structure includes taxes typically imposed by local governments, such as real and personal property taxes, deed taxes, and others. At the same time, the District's tax structure also includes taxes usually associated with the state level of government, such as individual and corporate income taxes, excise taxes and motor vehicle related taxes. About twothirds of the District's locally generated revenues come from taxes usually administered by a state.

This study compares the income, property, sales, and auto tax burdens in 51 different locations for a hypothetical family of three. The major state and local tax burdens for the family in the District of Columbia are compared with those in the largest city in each state. Map 3 (page 34) illustrates what percentage of the population in each state is represented by the population of its largest city. It is instructive to compare the tax burdens in one jurisdiction with the burdens in other jurisdictions. Useful information and insights can be gleaned from such a comparison. However, in evaluating or interpreting these comparisons, consideration should be given to special circumstances within each jurisdiction that may affect tax burdens. It must be emphasized that these burden comparisons reflect the assumptions used in their computation. For this reason it is important to study the methodology used in the report before drawing conclusions. The methodology used in this report is best suited to provide a relative comparison of tax burdens, within a single tax type and within a single year, across each of the 51 cities studied. Comparisons across the different types of taxes or across years should be made with caution.

As in past years, it should be further noted that readers are advised not to compare the hypothetical tax burdens across years; any number of small changes in state and/or local tax policy or in the assumptions of the study can result in misleading information under such comparisons. In 2012, the methodology used to estimate house values by income across the cities was changed and is continued in this 2013 report. This change has implications for the findings. The purpose of the study remains to compare tax burdens on a hypothetical household in different jurisdictions in a specific year, and not over time.

Further, the report does not include all taxes levied in a given jurisdiction, as there are state and/or local taxes not captured in the calculations here. However, the report makes every effort to consistently capture and measure tax burdens across jurisdictions, making comparisons of the relative tax burdens presented a key feature of the report.

## Chapter 1

## How Tax Burdens are Computed for the Largest City in Each State

The majority of taxpayers in the United States are aware that the amount of state and local tax liability of an individual taxpayer varies from one jurisdiction to another. The extent of these differences in state and local tax burdens across the country, however, may not be fully recognized.

The taxing systems of states and local jurisdictions differ in many aspects. The relationship of state taxes to federal tax law is one of several factors causing differences in tax burdens from one state to another. Other differences reflect decisions by state and local governments on what should and should not be subject to tax. For example, several states do not levy an individual income tax, although for many others it represents a major source of state funding. Tax burdens also differ because some states can shift a larger portion of governmental costs to business and may be able to "export" some of their tax burden. This has been true, for example, for energy producing states and states specializing in tourism.

This report compares the major state and local tax burdens of hypothetical households in Washington, D.C., with the burden for the households in the largest city in each of the 50 states for 2013. The four major taxes used in the comparison are the individual income tax, the real property tax on residential property, the general sales and use tax, and automobile taxes, including the gasoline tax, registration fees, excise tax, and the personal property tax. This study does not incorporate the effects of differing local tax burdens on the federal individual income tax burden. Income and property taxes are deductible in computing federal income taxes and the effect of federal deductibility is to reduce the overall difference in tax burdens between jurisdictions.

All tax burdens reflect state and local tax rates. Tax burdens are compared for a hypothetical family that consists of two wage-earning spouses and one school-age child. The gross family annual income levels used are $\$ 25,000, \$ 50,000, \$ 75,000, \$ 100,000$, and $\$ 150,000$. The wage and salary split is assumed to be 70-30 between the two spouses. All wage and salary income is further assumed to have been earned in the city. All other income is assumed to be split evenly. The family at each income level is assumed to own a single family home and to reside within the confines of the city. However, at the $\$ 25,000$ income level the study assumes that the household renter-occupies and not owner-occupies its housing unit. The particular assumptions used in the calculation of each major tax type are indicated on the following pages.

- Housing Values. Housing values across income levels in the 2013 study are based on data from the U.S. Census Bureau's American Community Survey (ACS) and adjusted using a linear multiplier for the different income levels. This involves dividing the median house value of each metropolitan statistical area (MSA) by the

MSA's median household income, and then multiplying that number (or multiplier) by each income level for which home ownership is assumed ( $\$ 50,000, \$ 75,000$, $\$ 100,000$, and $\$ 150,000$ ).

- Mortgage Interest. The mortgage interest amount (for use as an itemized deduction in the income tax) in the 2013 study is derived by calculating an amortization schedule for the estimated home value for each income level in each city.
- Renters versus Owners. The hypothetical family at the $\$ 25,000$ income level in this year's study is assumed to rent, rather than own a home. Given the real estate values in most areas of the country, the assumption that families earning $\$ 25,000$ per year rent is likely more realistic than the assumption that they own a home.

## Individual Income Tax

The five income levels used in this study are divided between wage and salary income and other types of income. The table below shows the wages and salaries, interest income and capital gains for Washington, D.C. married filers. The following data have been updated from the previous year for all of the income categories using 2012 tax year data from the IRS.

| Gross <br> Income | Wages and <br> Salaries | Interest | Long-Term <br> Capital <br> Gains 1/ |  |
| :---: | :---: | :---: | :---: | :---: |
| $\$ 25,000$ | Spouse 1 | $\$ 16,560$ | $\$ 646$ | $\$ 697$ |
| $\$ 50,000$ | Spouse 2 | 7,097 | $\$ 1,078$ | $\$ 781$ |
| $\$ 75,000$ | Spouse 1 | $\$ 33,699$ |  | $\$ 14,179$ |
|  | Spouse 2 | 14,442 | $\$ 906$ |  |
| $\$ 100,000$ | Spouse 1 | $\$ 51,041$ | $\$ 760$ | $\$ 720$ |
|  | Spouse 2 1 | 21,875 | $\$ 68,964$ | $\$ 1,026$ |

1/ Assumes a three-year holding period

Because the Federal Earned Income Tax credit (EITC) at the $\$ 25,000$ income level in some states will determine the state's EITC, and because several states (such as Alabama, Iowa, Louisiana, Missouri, Montana, and Oregon) allow the deduction of all or part of an individual's federal income tax liability in computing the state income tax, it is necessary to compute the 2013 federal individual income tax at each income level using the above assumptions. Many states in 2013 allowed taxpayers to begin their state income tax computations with federal adjusted gross income (AGI) or federal taxable income. Other states do not use either of these two measures of federal income as a starting point.

Total itemized deductions, which were also used in the federal tax computation, were assumed to be equal to the following, where the deductions have been adjusted to reflect Washington, D.C. Statistics of Income (SOI) income levels for tax year 2012.

| Deduction | Gross Income Level |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | \$ 25,000 | \$ 50,000 | \$ 75,000 | \$100,000 | \$150,000 |
| Medical (Gross) | 6,754 | 6,996 | 8,437 | 9,643 | 12,650 |
| Nondeductible Medical 1/ | -1,875 | -3,750 | -5,625 | -7,500 | -11,250 |
| Net Medical Deduction | 4,879 | 3,246 | 2,812 | 2,143 | 1,400 |
| Deductible Taxes | 2/ | 2/ | 2/ | 2/ | $2 /$ |
| Mortgage Interest | $3 /$ | $3 /$ | $3 /$ | $3 /$ | 3/ |
| Contribution Deduction | 2,592 | 3,199 | 4,119 | 4,280 | 3,984 |
| Gross Miscellaneous | 2,699 | 4,578 | 3,642 | 3,866 | 4,503 |
| Nondeductible 4/ | -500 | $\underline{-1,000}$ | -1,500 | $\underline{-2,000}$ | -3,000 |
| Net Miscellaneous Deduction | 2,199 | 3,578 | 2,142 | 1,866 | 1,503 |
| Other Miscellaneous Deductions | 161 | 164 | 147 | 163 | 69 |
| Total Deductions-without taxes And mortgage interest | 9,831 | 10,187 | 9,221 | 8,452 | 6,956 |

1/ Nondeductible medical equal 7.5 percent of federal A.G.I. All or part of medical deductions may be allowed in some states.
2/ The tax deduction varies from city to city and is based on real and personal property taxes computed in the 2013 study and individual income taxes computed in the 2012 study.
3/ Mortgage interest is based on 5th year interest paid on a home purchased in 2008 at an interest rate of $4.0 \%$.
4/ Nondeductible miscellaneous deductions equal 2 percent of A.G.I.

The itemized deductions shown above are used in the calculation of the 2013 tax burdens. The 2013 deductible real and personal property taxes computed in the current year's 51 -city burden study are used for the 2013 property tax deduction. For the 2013 state and local individual income tax deduction, 2012 data were used as a proxy. These figures were used in computing the 2013 federal income tax burden.

## Real Property Tax

Real property tax burdens in the 51 cities are a function of residential real estate values, the ratio of assessed value to market value, and the tax rate. Some jurisdictions allow certain deductions from the value of residential property before the tax is calculated while others allow credits against the calculated real estate tax. These deductions and/or credits are normally limited to owner-occupied properties.

The property tax rates for each of the 51 cities, presented in Table 4, page 19, indicate a wide range in these rates. This information is based upon data received from various state research agencies and/or local assessors. In addition to tax rate differences, data presented in Table 5 (page 20) indicate that the assumed market value of a residence for purposes of this study varies widely from one city to another at all income levels. For example, based on extrapolations of 2013 American Community Survey (ACS) data, the estimated house value at the $\$ 75,000$ income level ranges from a high of $\$ 586,404$ in Honolulu, Hawaii, to a low of $\$ 170,051$ in Charleston, West Virginia.

The housing values for each income level (except the $\$ 25,000$ income level) shown in Table 5 are derived from 2013 ACS data. A series of assumptions and calculations were made in order to estimate the median house value in each city, for each income level used in the report. First, data on median house values and median household incomes were retrieved from the Census Bureau's American Community Survey 2013. Data were collected for the Metropolitan Statistical Area (MSA) within which the largest city in each state falls. ${ }^{1}$

Since the focus of this study is identifying the median house value at the $\$ 50,000$, $\$ 75,000, \$ 100,000$ and $\$ 150,000$ income levels, a linear multiplier was calculated based on the MSA's median house value divided by its median household income. This multiplier was used to scale the house values to the various income levels in the report by multiplying them by each income level for the hypothetical house value at that level. This assumption serves as an input for both the property tax burden calculations and the mortgage interest deduction for the income tax burden. This method, which was also used in the 2012 Study, makes the assumption that house values increase in a linear fashion with income, which is the case up to near $\$ 100,000$ of annual income (all median household incomes in the 51 cities are below this level).

As stated previously, the study assumes that the family with an annual income of $\$ 25,000$ does not own a home (and as a result does not pay property tax directly), but instead rents. The property tax equivalent of rent in each city was first calculated by obtaining data on median rents for each MSA from the U.S. Department of Housing and Urban Development. ${ }^{2}$

Because renters pay property tax indirectly through their rent, it was necessary to compute a percentage of said rent constituting property taxes. States with property tax circuit breaker

[^0]programs estimate a "property tax rent equivalent" in order to calculate the amount that renters are paying in property taxes. While there is some variation in the assumption of rent constituting property taxes within different states, on average, states assume that about 20 percent of rent goes toward paying property taxes.

The use of the above methodology is an attempt to reflect the different values of housing in different parts of the country and at different income levels. Data from the 2013 ACS were used for estimating house values because they are the latest data comparable for all the jurisdictions in this study. It is important to note that these are hypothetical values based on income levels and do not represent average values for a particular jurisdiction.

In computing property tax burdens, it is also necessary to consider the various exemptions, limitations, and credits noted in Table 6 (page 21). The variety of real property tax exemptions, most of which apply only to residential real property, is very broad. Table 6 does not include the many senior citizen exemptions and credits available in a large number of states, nor can it adjust for "caps" on the growth in tax liability over time. Some states have a type of assessment limitation or valuation freeze. Table 4 (page 19), which compares residential real estate tax rates for each city, does not reflect the various exemptions and credits noted in Table 6. The many other exemptions and credits available, such as those for senior citizens, are also not reflected in Table 4, because seniors are not included in the hypothetical households of this study. However, the property tax burdens computed and shown in Table 1 of this study reflect the applicable provisions for families owning and residing in their homes.

## Sales and Use Tax

The sales tax burdens included in this study are based on information from the 2013 Bureau of Labor Statistics' Consumer Expenditure Survey (CES), and local and state sales tax rates. The CES provides data on average consumer expenditures by income level. For example, the CES data provide average annual expenditures on items such as food at home, food away from home, apparel and services, health care, and transportation. The expenditure data and the specific city and state tax rates on each type of item are used to determine the sales tax that these expenditures generate. This year, fewer CES categories are included, in order to attempt to only capture items that are generally taxed through the sales tax. Thus, lower sales tax burdens in 2013 likely reflect these lower levels of expenditures rather than reduced sales tax burdens, and the focus should be on the relative rankings across jurisdictions in a given year. The state and local general sales tax rates in each city are reported in Table 7, page 23.

## Automobile Taxes

Automobile taxes included in this study are gasoline taxes, motor vehicle registration fees (state and local), excise taxes, and personal property taxes levied on automobiles. Table 10 (page 26) summarizes automobile ownership assumptions for each income level, including types of vehicles, weight, value, and annual gasoline consumption.

## Chapter II

## Overall Tax Burdens for the Largest City in Each State

The major state and local tax burdens by tax type for the five different income levels used in this study are presented in Table 1 (pages 8-12). As reflected in Table 1, tax burdens across the 51 cities vary widely at all income levels. At the $\$ 25,000$ income level, the $\$ 4,210$ burden for Philadelphia, Pennsylvania, is significantly greater than the $\$ 1,370$ refund that a similar taxpayer in Burlington, Vermont, would receive (due to a refundable EITC and property tax credit). Similarly, at the $\$ 150,000$ income level, the Bridgeport, Connecticut, burden of $\$ 33,197$ is nearly six times the Cheyenne, Wyoming, burden of $\$ 5,578$. The differences in the composition of state and local tax structures, as well as housing markets and varied costs-of-living each contribute to the wide variation in tax burdens at all income levels.

The highest combined tax burdens of all four taxes added together at the $\$ 25,000$ income level occur in Philadelphia, Pennsylvania; Honolulu, Hawaii; Los Angeles, California; and Chicago, Illinois. Philadelphia's high local wage tax adds to the state income tax to make it by far the highest income tax burden for a family at this income level. The high property tax burdens (which are assumed to be a portion of rent) due to expensive real estate markets in these cities generally put Honolulu and Los Angeles at the top of this list, while Chicago's high income tax burden and relatively high property tax burden contribute to its ranking.

The lowest combined tax burdens of all four taxes added together at the $\$ 25,000$ income level occur in Burlington, Vermont; Albuquerque, New Mexico; Portland, Oregon; Minneapolis, Minnesota; and Cheyenne, Wyoming. The first four of these states have a refundable EITC, which contributes to their low ranking.

The highest combined tax burdens of all four taxes added together at the $\$ 150,000$ income level occur in Bridgeport, Connecticut; Philadelphia, Pennsylvania; Newark, New Jersey; Milwaukee, Wisconsin; and Providence, Rhode Island. The lowest combined tax burdens at this income level are Sioux Falls, South Dakota; Anchorage, Alaska; Las Vegas, Nevada, Memphis, Tennessee; and Cheyenne, Wyoming. These lower tax burdens are primarily a result of the lack of an income tax in these jurisdictions. Map 1 (page 13) illustrates the combined burden of all four taxes for a family earning $\$ 75,000 /$ year. See Appendix B for Maps 4-8, showing combined burdens by state for a family at all of the income levels.

No single pattern characterizes a city with either a high or a low tax burden. Generally, however, high tax burden cities have a graduated individual income tax rate and/or high real estate tax rates, moderate to high housing values and are cities located in the Northeast. Low tax burden cities generally have a low individual income tax (if they have one at all) and average or below average real property tax rates.

TABLE 1-a
ESTIMATED BURDEN OF MAJOR TAXES FOR A HYPOTHETICAL FAMILY OF THREE, 2013 \$25,000

| RANK | CITY | ST | TAXES |  |  |  | BURDEN |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

1/ Based on jurisdictions actually levying tax.
2/ Amounts in parentheses represent refundable State Earned Income Tax Credits. States with dashes do not have an income tax.
3/ Based on 20 percent of estimated annual rent.
4/ States with dashes do not have a sales tax. NH does not have a general sales tax, but some selective sales taxes apply to consumption items included.

Map 1: Total 2013 Tax Burdens (Income, Property, Sales, \& Auto) as a \% of Income (Family Earning \$75,000/Year)

The lighter the green in the map, the lower the tax burden as a percentage of income.

## Ghapter II

## Comparing Specific Tax Burdens for a Hypothetical Family of Three in the Largest City in Each State

## Individual Income Tax

Residents of 44 of the 51 cities in the study are subject to some type of individual income tax at the state and/or local levels. Individual income tax burdens vary widely due to factors such as differences in tax base, tax rates, exemptions, deductions, and treatment of federal taxes. These variations are reflected in the individual income tax burdens shown in Table 3 (page 16).

The percentage of income paid in individual income taxes by residents of the largest city in states having an income tax at the income level of $\$ 25,000$ ranges from a low of zero (or less than zero) percent in twenty three of the cities in the study to a high of 6.2 percent in Philadelphia, Pennsylvania. At the $\$ 150,000$ income level, the burden ranges from 1.2 percent of income in Fargo, North Dakota, to 6.9 percent in Philadelphia, Pennsylvania. It should be noted that the New Hampshire and Tennessee income tax is applicable only to interest and dividend income and the exemptions are high enough to eliminate individual income taxes at all income levels used in the study. Philadelphia has broad-based income taxes at both the state and local levels. The average individual income tax burden as a percent of income for the 44 cities levying the tax ranges from 0.1 percent at $\$ 25,000$ income to 4.3 percent at $\$ 150,000$ income.

As Table 3 indicates, there are several types of individual income tax systems including graduated state and local rates, graduated state and flat local rates, flat state and local rates, graduated state tax rates and flat state rates with exemptions. The most common system is the graduated state tax rate, which applies to taxpayers in 26 of the cities. Taxpayers of six cities are subject to a flat state tax rate with exemptions.

Eleven states have either graduated or flat state rates and flat local rates. New York City residents are subject to separate state and local income taxes, both of which are characterized by graduated rate schedules.

Several of the state individual income tax systems are indexed. Indexing takes several forms and is used to keep individuals from being taxed at higher rates if their income rises less than the rate of inflation. Thus, only the "real" income gain above the inflation rate is subject to higher tax rates. Table 2 on the following page summarizes the various portions that are indexed.

TABLE 2
STATES THAT INDEX SOME PART OF THEIR INDIVIDUAL INCOME TAX, 2013

| STATE |  |
| :--- | :--- |
| INDEXED PORTION |  |
| Arkansas | Tax brackets, Personal credits |
| California | Tax brackets, exemption (credit), standard deduction |
| Idaho | Tax brackets, standard deduction |
| Iowa | Tax brackets, standard deduction |
| Maine | Tax brackets, standard deduction |
| Massachusetts | Tax brackets, standard deduction |
| Michigan | Tax brackets, standard deduction |
| Minnesota | Tax brackets, exemptions, standard deduction |
| Montana | Tax brackets, exemptions, standard deduction |
| Nebraska | Tax brackets, standard deduction |
| North Dakota | Tax brackets, exemptions, standard deduction |
| Ohio | Tax brackets, standard deduction |
| Oklahoma* | Standard deduction |
| Oregon | Tax brackets, exemptions credit, standard deduction credit |
| Rhode Island | Tax brackets, standard deduction |
| South Carolina | Tax brackets, standard deduction |
| Utah* | Tax brackets, standard deduction |
| Vermont | Tax brackets, standard deduction |
| Wisconsin | Tax brackets, standard deduction |
| West Virginia | Family tax credit |
| Washington, D.C. | Standard deduction, personal exemptions |
| Sarer |  |

Sources: Federation of Tax Administrators, "State Individual Income Tax Rates (as of January 1, 2014)";
Wolters Kluwer/CCH 2014 State Tax Handbook; Institute for Taxation and Economic Policy, "Who Pays?", January 2013.

* Oklahoma and Utah use the federal standard deduction, which is indexed to inflation.

States that tax a percentage of federal net taxable income or a percentage of the federal liability implicitly accept the federal indexing of tax brackets, exemptions, and the standard deduction.

## Real Property Tax

All 51 cities in the study levy a property tax on residential property located within the city. The real property tax is a function of housing values, real estate tax rates, assessment levels, homeowner exemptions, and credits. Nominal rates used in Table 4 (page 19), represent the "announced" rates levied by the jurisdiction, while effective rates consider the various assessment levels in the cities. As the data indicate, effective rates range from a high of $\$ 3.39$ per $\$ 100$ of assessed value in Detroit Michigan, to $\$ 0.01$ per $\$ 100$ of assessed value in Birmingham, Alabama and Las Vegas, Nevada (when not rounded, Birmingham has the lowest rate at 0.00695, and Las Vegas' rate is 0.0109 ). Assessment levels vary dramatically from 1.38 percent of assessed value in Billings, Montana, to 100 percent of assessed value in fourteen cities, including the District of Columbia. Local assessors, state tax and county officials, and state and local websites provided the assessment level and nominal rates used in the cities. The District's effective property tax rate (net of assessment value, and net of property tax relief measures) is among the lowest of the 51 cities, ranking 41st.

The assumed housing values in the 51 cities at each of the five income levels are presented in Table 5, page 20. Housing values at the same income level vary a great deal based on housing markets in each city. As previously mentioned, these housing values are extrapolated from Census data and represent a hypothetical house value for each income level. In addition, several jurisdictions allow tax exemptions and credits in the calculation of the property tax. These exemptions and credits are noted in Table 6 (page 21). This study does not model the impact of property tax caps that are available in some jurisdictions.

Table 1 indicates that, based on the particular assumptions used in this report, the property tax is the highest of the four taxes at each income level. However, it is important to note that the main purpose of this report is to make comparisons across the 51 cities within a specific type of tax. As previously noted, these are hypothetical tax burdens based on various assumptions made in the report, and comparisons across tax types should be made with caution.

At all four of the income levels for which home ownership is assumed (\$50,000 to \$150,000), Newark, New Jersey; ${ }^{3}$ Bridgeport, Connecticut; Philadelphia, Pennsylvania; Milwaukee, Wisconsin; and Los Angeles, California have the highest property tax burdens, in that order. For these cities, this is due primarily to a combination of high real estate tax rates and high housing values, as can be seen in Table 4 (page 19).

At all four of the income levels, the lowest property tax burdens can be found in Charleston, West Virginia; Billings, Montana; Birmingham, Alabama; and Cheyenne, Wyoming. These low real estate tax burdens result from a combination of a low effective real estate tax rate, below average housing values, or an exemption program.

[^2]At the $\$ 25,000$ income level, it is assumed that these families rent rather than own a home. At this level, New York City, New York; Honolulu, Hawaii; Washington, D.C.; Boston, Massachusetts; and Newark, New Jersey, have the five highest property tax burdens (as a portion of rent). This trend is solely due to the high cost of housing in these metropolitan areas, as actual property tax rates are not applied in the case of rental housing (as previously mentioned, 20 percent of the annual rent is assumed to go toward paying the property tax).

Map 2 below illustrates the range of property tax burdens for a family earning \$75,000 a year. The darker the green shading in a state, the higher the burden is.

## Map 2: 2013 Property Tax Burdens, in \$ (Family earning \$75,000/year)

The lighter the green in the map, the lower the tax burden.

Source for "Tax on Rent": Rental cost data are from the U.S. Department of Housing and Urban Development, for median fair market rents by MSA. In order to select rents that were reasonable for a family earning $\$ 25,000$ per year, the rents for a studio apartments were selected. The property tax equivalent of rent is assumed to be 20 percent of annual rent.
Source for all other columns: ORA Calculations. Data on median household incomes and median house values for 2013 were retrieved from the
Census Bureau's ACS 2013. A multiplier was applied to each income based on the relationship of median income to median home value.

## Sales and Use Tax

Residents of 46 of the 51 cities in this study are subject to some form of sales and use tax. The combined sales tax rates range from 11.50 percent in Memphis, Tennessee, to 4.5 percent in Honolulu, Hawaii, as indicated in Table 7, page 23. The highest state sales tax rate is 7 percent in Indiana, Mississippi, New Jersey, Rhode Island, and Tennessee; while the lowest state rate of 2 percent is found in Nevada. Sales taxes are levied by 26 of the 51 cities in addition to state sales taxes with the highest city rate at 5.75 percent in Washington, D.C. (followed by 4.5 percent in New York City). The lowest city rate ( 0.5 percent) is present in Honolulu, Hawaii; Charleston, West Virginia; and Minneapolis, Minnesota. Of the twenty counties levying a sales tax, the highest rate ( 3.0 percent) is in Fulton (Atlanta, Georgia). Seven school districts and six transit districts also levy sales taxes, with transit district rates ranging from 0.1 percent in Milwaukee, Wisconsin, to 1.2 percent in Denver, Colorado.

According to Table 1, and based on the assumptions made in the report, the average sales tax burden is the second highest of the four major tax types at the $\$ 25,000$ income level. For families subject to a sales tax, the highest sales tax burdens across each of the income levels are in Memphis, Tennessee; Birmingham, Alabama; New Orleans, Louisiana; Kansas City, Missouri; and Little Rock, Arkansas.

Cities that levy a sales tax and that have the lowest general sales tax burdens at all income levels include Baltimore, Maryland; Cheyenne, Wyoming; Providence, Rhode Island; Detroit, Michigan; and Virginia Beach, Virginia.

## Automobile Taxes

Residents of all 51 cities in this study are subject to gasoline taxes and some type of automobile registration fee or tax. The automobile taxes included in this study are gasoline taxes, motor vehicle registration fees, excise taxes, and personal property taxes. Twelve of the cities levy a personal property tax based on the value of motor vehicles owned by a taxpayer. Gasoline tax rates in each of the 51 cities as of December 31, 2013, are compared in Table 8, page 25. The total gasoline tax rates vary from as high as 39.5 cents per gallon in Los Angeles, California; 37.5 in Charlotte, North Carolina, and Seattle, Washington; and 34.7 cents in Charleston, West Virginia, to a low of 8.0 cents per gallon in Anchorage, Alaska.

As noted before, citizens in all 51 cities are subject to some type of automobile registration fee and tax. They are usually either flat per-vehicle rates or excise taxes based on either weight or value. The types of registration and other automobile taxes to which residents of the 51 cities are subject are summarized in Table 9, page 26.

Twelve cities levy personal property taxes on automobiles using various methods. Some cities use a combination of assessment levels and tax rates, which may or may not be the same as is used for other personal property or for real property. Others use the same assessment system and property tax rate for automobiles as they do for personal residences.

The vehicle assumptions used for calculating automobile personal property taxes, excise taxes, the gasoline tax, and registration fees are presented in Table 10, page 26.

The lowest tax burdens for a specific tax at all income levels in this study are the automobile tax burdens (except in those states that offer refundable EITCs at the $\$ 25,000$ income level). Los Angeles, California; Providence, Rhode Island; Virginia Beach, Virginia; Jackson, Mississippi; and Columbia, South Carolina, are among the cities with high automobile tax burdens. These cities levy either a personal property tax or a very high excise tax. Indianapolis, Indiana; Newark, New Jersey; New Orleans, Louisiana; Detroit, Michigan; and Albuquerque, New Mexico, have consistently low automobile tax burdens. Each of these cities have flat registration rates or registration by weight, moderate gasoline tax rates, and no personal property or excise tax.

## CHAPTER IV

## How Do Tax Burdens in Washington, D.C. Compare with Those in the Largest City in Each State?

The nation's capital, Washington, D.C., is unique in many respects. It has a special status in which the day-to-day activities and functions of state, county, city, and special districts are combined in one governmental unit. The Mayor and the 13 -member District of Columbia Council combine the functions of a state legislature, a county board of commissioners, and a city council. Due to this combination of responsibilities, the District has the taxing powers of a state, a county, and a municipality, although these powers are limited by actions of the federal government. The graduated income tax, the general sales and use tax, and the per gallon gasoline tax are all comparable in form to those levied by most states. The property tax based on assessed value is similar to the type levied in cities and counties. As a result, the tax burden of District residents should be compared to the combined state and local burdens borne by residents of other large cities.

The burden of each of the four major taxes for Washington, D.C., is compared with the 51city average at all income levels in Table 11, page 30. At the $\$ 25,000$ and $\$ 75,000$ income levels, Washington, D.C. has a lower income tax burden than the average for the other 51-cities. The income tax burden at the $\$ 50,000, \$ 100,000$, and $\$ 150,000$ income levels is slightly higher in D.C. than for the 51-city average. This is because the District has a somewhat more progressive income tax.

The property tax burden, as calculated in this study, is higher at the $\$ 25,000$ income level in Washington, D.C. than the average for the other 51 cities, which reflects the high cost of rental housing in the District. However, at the other four income levels ( $\$ 50,000, \$ 75,000, \$ 100,000$, and $\$ 150,000$ ), the property tax burden is lower in D.C. than in the 51 -city average. In spite of the fact that the District's rental and house values are higher than the 51-city average at each income level, these rankings highlight the District's low property tax burden, as compared to the other 51 cities.

The District of Columbia has a relatively high percentage of low-income taxpayers, which limits the District's revenue-raising capacity. Despite these limitations, the District of Columbia must perform and provide funding for functions usually provided at both state and local levels of government. The non-municipal functions include responsibility for welfare programs, physical and mental health care, and maintenance of the public education and state university systems.

The District of Columbia's sales tax burdens are very similar to the 51-city average at each
income level, and D.C.'s auto tax burdens are lower than the 51-city average at every income level, illustrating the District's competitive sales tax rates and its lower than average auto taxes.

## Individual Income Tax

According to Table 11 and based on the assumptions made in this report, the individual income tax burden for Washington, D.C. is below the average for the 44 cities that levy an individual income tax at the $\$ 25,000$ level. Washington, D.C. levies an individual income tax with four rates (for tax year 2013): 4.0 percent on the first $\$ 10,000$ of taxable income; 6.0 percent on the next $\$ 30,000$ of taxable income; 8.5 percent on taxable income over $\$ 40,000$ up to $\$ 350,000$; and 8.95 percent on taxable income over $\$ 350,000$. For tax year 2013 personal exemptions of $\$ 1,700$ per dependent were allowed, as well as a $\$ 1,700$ exemption for the filer and spouse, respectively. A standard deduction of $\$ 4,050$ ( $\$ 2,000$ for married-filing separately), and indexed to the CPI, was in effect for the period of this study. ${ }^{4}$ Itemized deductions are the same as those allowed in computing the federal income tax, but the District does not allow the deduction of its own individual income tax. Washington, D.C. also has "circuit-breaker" property tax relief programs for both elderly and non-elderly qualified homeowners and renters, through which a credit can be claimed against a taxpayers income tax liability. The District's low-income credit eliminates the District income tax for taxpayers with no federal income tax liability.

Even though the rates have decreased in general over the last several years, the higher income tax burden for the higher income levels is due in part to restrictions on the individual income tax base of the District. Federal law prohibits Washington, D.C. from taxing the earnings of non-residents working within the city, a restriction not imposed on any other city in the nation. As a result of this, the District of Columbia taxes residents at a higher rate than would otherwise be the case since approximately 60 percent of the wages and salaries earned in the District of Columbia are earned by non-residents. ${ }^{5}$

## Real Property Tax

As previously noted, and based on the assumptions in this report, the property tax burdens in the District of Columbia are below the 51-city average at the $\$ 50,000, \$ 75,000, \$ 100,000$ and $\$ 150,000$ income levels (See Table 11, page 30). The tax on residential property in the District of Columbia is based on the assessed value of the property. All property is assessed at a statutory level of 100 percent of its estimated market value. The tax rate on residential owner-occupied property in the District of Columbia is $\$ 0.85$ per $\$ 100$ of assessed value for 2013. D.C. homeowners deduct a homestead exemption of $\$ 69,100$ from the assessed base, not the tax bill, before calculation of the property tax for all owner-occupied dwellings. The District has capped the growth of property assessments at 10 percent, when calculating the tax due. The calculations in this study do not adjust for capped growth.

[^4]Tax Rates and Tax Burdens in the District of Columbia: A Nationwide Comparison

## Sales Tax

According to Table 11, the sales tax burden in the District of Columbia is lower than the 51city average at the $\$ 25,000$ and $\$ 75,000$ income levels; while it is slightly higher than the average at the $\$ 50,000, \$ 100,000$, and $\$ 150,000$ income levels. In 2013, the District levied a sales tax with five different rates. This rate structure is utilized, in part, to take advantage of the District's special status as a tourist center and to increase the contribution of non-residents working in the city. These differential rates illustrate the concept of tax exporting. The following table details the sales tax rates in effect at the end of 2013. Items exempt from the District of Columbia sales tax include groceries and prescription drugs.

| ITEMS | SALES TAX RATE |
| :--- | :---: |
| Retail rate for sales of certain tangible personal property and selected services, non- <br> alcoholic soft drinks, food, or drinks sold in vending machines. | $5.75 \% 1 /$ |
| Restaurant meals, liquor sold for consumption on and off the premises, rental <br> vehicles, prepaid telephone cards, tickets sold for baseball games, merchandise sold at <br> the baseball stadium, tickets sold for events at the Verizon Center and merchandise <br> sold at the Verizon Center. | $10.0 \%$ |
| Other tobacco products, including cigars (except premium cigars are taxed at 6\%), <br> chewing tobacco, snuff, roll-your-own-tobacco, hookah tobacco, and pipe tobacco. | $12.0 \%$ |
| Transient accommodations. | $14.5 \%$ |
| Parking motor vehicles in commercial lots, rolled tobacco products usually used for <br> smoking, chewing or as snuff, made in whole or in part with tobacco, except for <br> cigarettes, premium cigars or pipe leaf tobacco products. | $18.0 \%$ |
| Source: "D.C. Tax Facts 2013." Government of D.C., Office of the Chief Financial Officer, Office of Revenue Analysis, p. 26. <br> 1/ This rate decreased to 5.75\% on October 1, 2013. It was 6.0\% prior to that date. |  |

## Automobile Taxes

Washington, D.C., automobile tax burdens are below the 51-city average for all income levels, as shown in Table 11. Washington, D.C. taxes gasoline and requires registration fees for automobile owners. The gasoline tax rate is 23.5 cents per gallon. Registration fees of $\$ 72$ on cars weighing less than 3,500 pounds; $\$ 115$ on cars equal to or greater than 3,500 pounds and less than 5,000 pounds; and $\$ 155$ on automobiles weighing more than 5,000 pounds were in effect for the period of this study. The District of Columbia does not impose an annual excise tax or personal property tax on automobiles.

## Summary

As noted above, the tax burden of the District of Columbia is influenced by many factors. One of the major reasons the District of Columbia income tax burden is above the average at the $\$ 150,000$ income level is the restriction on the District's taxing authority mandated by Congress. Factors such as the prohibition on taxing non-resident income, plus the large percentage of taxexempt properties (fifty-six percent of District acreage is tax exempt ${ }^{6}$ ), have combined to create difficult conditions under which to raise revenues to operate the city. Some of the positive factors, which tend to increase the District tax base, include substantial tourist activity as well as the large volume of business and lobbying activity generated by the federal presence.

[^5]TABLE 11
TAX BURDENS IN WASHINGTON, D.C. FOR A HYPOTHETICAL FAMILY COMPARED WITH THE AVERAGE FOR THE LARGEST CITY IN EACH STATE BY INCOME LEVEL, 2013

[^6]
## CHAPTER V

## Why Do Tax Burdens Differ From One City To Another?

In the preceding chapters, the differences in tax burdens for the largest city in each state in the United States were discussed. For added context, the population of these cities is provided in Table 12, page 33. Further, a map showing the population of the largest cities as a portion of total state population illustrates how many people, and what portion of each state, are represented by the tax burdens calculated in this study. The assumptions used to compute the various tax burdens will affect the relative tax burdens for the 51 cities. This is especially true for the real estate tax, because both the methodology used to derive housing values and the relative housing values from one income level to another and from one city to another are important determinants of the real property tax burden. However, no matter what set of assumptions is used in such a study; there will be substantial tax burden differences from one city to another. Some of the reasons for these differences are as follows:

1) This study only measures major state and local tax burdens for individuals. Business tax burdens also differ substantially from one city to another. Many cities, because of a large manufacturing base or because of a dominant industry, can shift a large portion of the tax burden away from individuals to businesses. Cities in natural resource states, for example, may shift a substantial portion of the tax burden to industry, thus exporting, to some extent, their local government tax burden. Convention and tourist activity in cities such as Chicago, Washington, D.C., New York City and Las Vegas can help reduce local tax burdens by increasing sales tax, gasoline tax, and parking tax revenues from non-residents, another form of tax exporting.
2) Service demands in each of the 51 cities may vary a great deal. Cold weather services, such as snow removal, in northern cities may increase costs. Furthermore, citizens of some cities simply desire, or are accustomed to, more government services than residents of other cities.
3) The costs of providing services may differ substantially from one city to another. Wage levels, efficiency of the work force and costs of overhead items, such as utilities, may be very different.
4) The tax base of each city is different. Cities that have a relatively large percentage of employed residents will normally have a broad tax base.

This type of city can levy taxes at lower rates than can those with low levels of
employment or high levels of exempt property. External forces, such as the federal presence in Washington, D.C., can restrict the tax base. The tax base can also be defined by the scope of a particular tax. For example, it is desirable from a social point of view to exempt groceries from the sales tax; however, such an exemption can narrow the sales tax base and may require a higher sales tax rate in order to raise sufficient revenues.
5) The proportion of public versus private services may differ from one city to another. Some cities may provide services such as garbage collection and hospital care, while in other cities the private sector may perform these services for a fee.

As a result, a city in which the private sector performs such functions may have a lower tax burden than one in which these functions are performed by the city. In these instances, the fees charged by the private sector represent payments by individuals for public services that are not reflected in tax burdens.
6) Certain taxes that are not discussed in this study may affect state and local tax burdens. Taxes not covered by the study, which are levied on individuals, include liquor and cigarette taxes and taxes on public utility bills. Rates for a few of these taxes are listed at the end of the report.
7) The state and local tax burdens in this study are computed without regard to their effect on the federal tax burden of individuals in the respective cities. To some extent, high state and local income and property taxes can be used to partially alleviate federal tax burdens through itemized deductions.

As noted above, the number and kind of public services each city provides necessarily has a bearing on the amount of revenue that must be raised. The tax burden comparisons in this report must be studied in the context of these differing conditions, in addition to the assumptions and methodologies used.

The Government Accountability Office has documented in the past that the District of Columbia has had a structural imbalance, due primarily to two factors. First, the District has a higher service delivery cost than the average state fiscal system - due to the high rates of poverty and crime associated with an urban area, as well as a higher cost of living. ${ }^{7}$ Further, the District's revenue capacity is restricted by the federal presence - the District cannot tax nonresidents and as of Tax Year 2013 property assessments, 45.1 percent of the land value is tax exempt. ${ }^{8}$ In spite of this restriction, GAO notes that the District has high revenue capacity. The city's economic and fiscal situation has changed over the the past decade, however these factors remain relevant when considering the District's tax structure and its tax burdens.

## Part II

## A Comparison of Selected Tax Rates in the District of Columbia with Those in the 50 States as of January 1, 2014

## Overview

As can be seen from a review of the major taxes compared in this report and presented below, the tax rates in the District of Columbia are among the highest in the nation. Of the 12 taxes compared, tax categories for which District rates are higher than in most of the states include: cigarette; corporate income; individual income; deed recordation; motor vehicle excise; and motor vehicle registration fees. In three tax categories -- beer, light wine, and distilled spirits -- the District has lower tax rates than most states. Insurance premiums has eighteen states higher than the District and fifteen states lower than the District. Motor vehicle fuel has twentythree states higher than the District, and twenty-six states lower than the District.

1/ Does not include various local income taxes.
2/ If married filing joint with at least one dependent, exemption $=\$ 6,300$.
3/ If M/S, S and FAGI does not exceed $\$ 10,000$ and if $\mathrm{M} / \mathrm{J}$ income is up to $\$ 26,575$ based on number of dependents, and if HH income limitation up to $\$ 31,000$, based on the number of dependents. Limit of credit for $\mathrm{M} / \mathrm{J}, \mathrm{HH}$ is $\$ 240$ and for $\mathrm{M} / \mathrm{S}, \mathrm{S}$ is $\$ 120$, exemption for $\mathrm{M} / \mathrm{J}=\$ 80$; and dependents $=\$ 40$.
4/ Head of Household personal exemption is $\$ 19,000$, and married filing separately personal exemption is $\$ 12,000$. For single filers with CT AGI in excess of $\$ 26,000$, the exemption decreases by $\$ 1,000$ for each $\$ 1,000$ increase in CT AGI. The exemption is phased out at $\$ 37,000$. For married persons filing jointly, filing jointly for CT, or qualifying widow(er) with dependent child the exemption decreases by $\$ 1,000$, for each $\$ 1,000$ in CT AGI that exceeds $\$ 48,000$. The exemption is phased out at $\$ 71,000$. For married persons filing separately and filing separately for CT only with CT AGI in excess of $\$ 24,000$, the exemption decreases by $\$ 1,000$ for each $\$ 1,000$ increase in CT AGI. The exemption is phased out at $\$ 35,000$. For heads of household filers with a CT AGI in excess of $\$ 38,000$, the exemption decreases by $\$ 1,000$ for each additional $\$ 1,000$ of CT AGI. There is no exemption if the taxpayer earns more than $\$ 56,000$.
5/ Civil unions are treated the same as M/J.

Note: Tax rates do not include local option taxes (see Table 8).
1/ Effective July 1, 2013, Virginia's state gasoline tax rate changed from 17.5 cents per gallon to 3.5 percent of the statewide average wholesale price per gallon. In July 2013, this equated to 11.1 cents per gallon.
2/ An additional $\$ .003$ per gallon charged for leaking underground storage tank tax and $\$ 0.008$ environmental impact fee.
3/ Sales tax added to excise. Local taxes vary. There is also a state inspection fee per gallon of $\$ .00125$ per gallon.
4/ An additional $\$ 0.02$ per gallon charged for petroleum inspection fee.
5/ Rate is as of July 1, 2013; tax went down to \$0.36 on July 1, 2014.

* $\$ 11.00$ represents the deed recordation tax + the deed transfer tax per $\$ 500$. In D.C. $1.1 \%$ of consideration or fair market value for residential property transfers $<\$ 400,000 ; 1.45 \%$ of consideration of fair market value on the entire amount if transfer is $>\$ 400,000$.
$1 / \$ 1.00$ for the first $\$ 1,000$ or fractional part thereof. Thereafter, $\$ 0.10$ per each $\$ 100.00$.
2/ State transfer tax rate only. Rate is $0.25 \%$ of consideration for sales of improved residential real property to first-time home buyers who occupy the property as a principal residence. State recordation tax varies by county and is not reflected in this number.
3/ In county whose population is 400,000 or less, $\$ 1.95$ to $\$ 2.00$.
4/ If the property is residential for which the buyer is not eligible for a homeowner's exemption, the tax rate graduates from $\$ 0.75$ to $\$ 6.25$ per $\$ 500$ of value, as value rises from less than $\$ 600,000$ to over $\$ 10,000,000$. Otherwise, the tax rate graduates from $\$ 0.50$ to $\$ 5.00$ per $\$ 500$ of value.
5/ Unless $\$ 500$ part of first $\$ 110,000$ paid in consideration for a principal residence, in which case the tax would be $\$ 2.50$.
6/ Between $\$ 4.00$ and $\$ 12.10$, based on value.

## Appendix A: Sensitivity Analysis of the Property Tax Assumptions

As previously mentioned in the report, the tax burden calculations presented here are sensitive to the assumptions made. In particular, the inputs to the property tax burden calculation highly impact the overall findings given that it is generally the largest of the four taxes that make up the tax burden calculations, and also because it is a direct input to the income tax burdens, as as an income tax deduction.

A sensitivity analysis illustrates how the results would change if different data or assumptions were used. Here, the property tax burdens are re-calculated for the five cities with the highest median house values (using the Metropolitan Statistical Area as a geographic identifier), and the five with the lowest median house values, with the exception of the highest and lowest outliers being removed. These two outliers are left out because the Census does not provide the city-level data needed to do a sensitivity analysis for these two cities (the report relies on MSA level data, rather than city level data, because there is not city-level data available for all 51 cities). This is the case with Honolulu, Hawaii, which has the highest median house value of all of the MSAs, as well as Charleston, West Virginia, which has the lowest median house value of any of the 51 MSAs. Thus, these two outliers will be excluded, and the sensitivity analysis focuses on the next five cities with the highest and lowest median house values in their surrounding metropolitan areas.

Table 28: Sensitivity Analysis of Property Tax Assumptions

|  | Property Tax Burdens w/ MSA data |  |  |  |  | Property Tax Burdens w/ City data |  |  |

Source: MSA and city-level median house values and median incomes are from the U.S. Census' American Community Survey, 2013, in order to calculate property tax burdens. See property tax burden methodology on page 5 for a description of the calculations made.

When comparing the data in Table 28 above with the findings in Table 1, the main differences are in the cities with the higher median house values. All of the top five cities, except Bridgeport, Connecticut, would have even higher property tax burdens if the city-level house value data were
used, as compared to those of the surrounding MSAs. Because Bridgeport, Connecticut, ranks within the top three for property tax (and overall) burdens at all income levels, its ranking is affected by the methodology used in the report, though not drastically.

The property tax burdens presented above are a function of median house values, median household incomes, and property tax structures within each city and state for 2013. No single factor determines the property tax burden. However, in Washington, D.C., for example, 2013 median house values are almost $\$ 100,000$ higher within the District than in the surrounding MSA. However, the 2013 median household income of the District is over $\$ 20,000$ lower than the median income of the entire MSA. In this case, the higher house value impacts the calculation more and slightly increases the District's property tax burden as compared to using MSA-level data.

This is the opposite scenario of that in Bridgeport, CT, where the 2013 median house value and median income in Bridgeport property are significantly lower than the surrounding MSA, which includes Stamford and Norwalk, as well. Thus, the property tax burdens would be slightly lower in Bridgeport, CT, if the calculations were made with city-level rather than MSA-level data.

## Appendix B: Additional Tax Burden Maps

Map 4: Total 2013 Tax Burdens (Income, Property, Sales, \& Auto) as a \% of Income (Family Earning \$25,000/Year)

The lighter the green in the map, the lower the tax burden as a percentage of income.

## Map 5: Total 2013 Tax Burdens (Income, Property, Sales, \& Auto) as a \% of Income (Family Earning \$50,000/Year)

The lighter the green in the map, the lower the tax burden as a percentage of income.

| \% Burden |  |
| :--- | ---: |
|  |  |
| $3.7 \%$ | $20.9 \%$ |

Map 6: Total 2013 Tax Burdens (Income, Property, Sales, \& Auto) as a \% of Income (Family Earning \$75,000/Year)

The lighter the green in the map, the lower the tax burden as a percentage of income.

## Map 7: Total 2013 Tax Burdens (Income, Property, Sales, \& Auto) as a \% of Income (Family Earning \$100,000/Year)

Map 8: Total 2013 Tax Burdens (Income, Property, Sales, \& Auto) as a \% of Income (Family Earning \$150,000/Year)

The lighter the green in the map, the lower the tax burden as a percentage of income.

[^0]:    ${ }^{1}$ Newark, New Jersey, falls in the New York City MSA and Wilmington, Delaware, falls in the Philadelphia MSA, thus those MSA data are used for both cities. See page 55 for a sensitivity analysis in which city level data (unavailable for all 51 cities) are used instead of MSA level data for select cities.
    ${ }^{2}$ U.S. Department of Housing and Urban Development, "2013 50 ${ }^{\text {th }}$ Percentile Rent Estimates." Data for studio apartments used.

[^1]:    No income tax: Anchorage, AK; Jacksonville, FL; Las Vegas, NV; Sioux Falls, SD: Houston, TX: Seattle, WA; Cheyenne, WY.
    Note: Negative numbers result from refundable State Earned Income Tax Credits.
    Source for classifications: Wolters Kluwer/CCH 2014 State Tax Handbook and Tax Foundation, Local Income Tax Rates by Jurisdiction, 2011; percentages at each income level are effective tax rates calculated by ORA using the assumptions and methodologies specific to this report.
    1/ Imposed on employers.
    2/ Based on jurisdictions actually levying tax.

[^2]:    ${ }^{3}$ Newark, NJ is in the New York City (NYC) Metropolitan Statistical Area, thus the data used for Newark are the same as for NYC. See page 55 for a sensitivity analysis of how several cities' (including Newark's) property tax burdens would change using city-level data.

[^3]:    1/ Gas Mileage Guide, EPA fuel economy estimates for city driving, U.S. Department of Energy. http://www.fueleconomy.gov/
    2/ National Automobile Dealers Association Used Car Guide. http://www.nadaguides.com
    3/ Assumes 15,000 miles driven.

[^4]:    4 "Notice of Increases in the 2013 Standard Deduction, Personal Exemption, Homestead Deduction an Trash Collection Credit Amounts." Government of the District of Columbia. Office of the Chief Financial Officer, Office of Revenue Analysis. Washington, D.C.: 2013. p. 1.
    5 "District of Columbia Economic and Revenue Trends: October 2013." Government of the District of Columbia, Office of the Chief Financial Officer, Office of Revenue Analysis. Washington, D.C.: 2013. p. 6.

[^5]:    ${ }^{6}$ "D.C. Tax Facts 2013." Government of the District of Columbia, Office of the Chief Financial Officer, Office of Revenue Analysis, p. 37.

[^6]:    1/ Income and sales averages are based on cities actually levying tax. As a result, the overall average is not equal to the sum of the averages for each separate tax type.

[^7]:    7 "Structural Imbalance and Management Issues." GAO-03-666. Government Accountability Office. Washington, D.C.: 2003. p. 1.
    8 "D.C. Tax Facts 2014." Tax Exempt Land value as a \% of Total Taxable and Exempt Land Value. Government of the District of Columbia, Office of the Chief Financial Officer, Office of Revenue Analysis. Washington, D.C.: 2014. p. 38.

[^8]:    1/ This count excludes D.C.
    2/ Includes two states that tax dividends and/or interest only.
    3/ Comparisons are based on highest comparable rate in each jurisdiction. Those based on federal liability are not included.

[^9]:    1/ Does not include various local income taxes.
    2/ A taxpayer whose Federal AGI exceeds the amount shown in the "maximum over" column is allowed a personal exemption of $\$ 2,000$ and \$2,000 for each dependent.

[^10]:    Source: Survey of State Revenue Department Officials; Federation of Tax Administrators, "State Individual Income Tax Rates as of January 1, 2014"; and Tax Foundation, "State Personal Income Tax Rates and Brackets 2014 Update" March 21, 2014.

    1/ Does not include various local income taxes.
    2/ Utah provides a tax credit equal to $6 \%$ of the federal personal exemption amounts (and applicable standard deduction).

[^11]:    * 'Federal taxable income' is the definition of income for state base.

    1/ Federal taxes used as a deduction are limited to $\$ 5,000$. Plus "additions" \& "subtractions" to arrive at Montana Adjusted Gross Income.
    2/ Tax only on interest and dividends.
    3/ Federal deductibility is limited to $\$ 6,100$, and begins to phase out at a FAGI of $\$ 125,000$ for Single or Married Filing Separate or $\$ 250,000$ for Head of Household or Married Filing Joint.

[^12]:    1/ Montana taxes beer at different rates per size of brewer (< 5 k barrels produced - $\$ .04$ per gallon; 5 k to 10 k - $\$ .07$ per gallon; 10k to 20 k $\$ .11$ per gallon; and > 20k - \$. 14 per gallon).
    2/ Additional tax of $17 \%$ of wholesale price.
    3/ Credit allowed to small brewers.
    4/ $\$ 0.08$ per gallon for bulk beer.
    5/ Credit allowed to small brewers; increased from $\$ .761$ per gallon until 07/01/13.
    6 / Rate is $\$ 0.08$ per gallon for microbrewer.
    7/ In Utah, "beer" is not more than $4 \%$ of alcohol by volume. This is the rate shown. For "heavy beer" which is $>4 \%$ in Utah, there is a
    higher tax rate above the landed case cost and is sold at State Liquor Stores.
    $8 /$ Rate is $\$ 0.54$ per gallon for draft beer.

[^13]:    Source: Survey of State Revenue Department Officials; Federation of Tax Administrators, "State Tax Rates on Wine, (January 1, 2014)."

    1/ $18 \%$ wine \& liquor tax on top of a $30 \%$ markup.
    2/ Wine markup is currently $86 \%$ above the "landed case cost" (cost of the product, shipping cost, Dept. of Alcoholic Beverage Control Administration fee of $\$ 0.9$ per case).
    3/ $\$ 1.06$ per gallon if sold to an agency owned liquor store.

[^14]:    Source: Survey of State Revenue Department Officials; Federation of Tax Administrators, "State Excise Tax Rates on Cigarettes, (January 1, 2014)."

    1/ Oregon's tax increased to $\$ 1.31$ for 2014.
    2/ Tax is $\$ 1.75$ cents per pack for a pack of 25 cigarettes.
    3/ Health Impact Fee of $\$ 0.75$ per pack was eliminated.

[^15]:    Source: Survey of State Revenue Department officials and review of State Web Sites.
    Note: Local rates in parentheses
    1/ Tax does not apply to vehicles previously titled in another jurisdiction when owners move to the District.
    2/ Vehicles exempt from sales tax effective 03/01/2013. Title Ad Valorem Tax collected at time of title application. Rate for 2013 is $6.5 \%$.
    3/ Tax on sales price less trade-in allowance.
    4/ This is a statewide levy, but it is collected by the counties.
    5/ Maximum of \$300.00.
    6/ Local sales taxes are capped at $\$ 25$ per 1 percent of tax on a single transaction. Used cars below $\$ 4,000$ are exempt. Maximum local sales tax applied against transaction is $\$ 62.50$
    7/ Tax on sales price less trade-in allowance.
    $8 /$ State rate $7 \%$ on most vehicles with sales price of more than $\$ 50,000$.
    9 Includes $0.3 \%$ sales and use tax that only applies to sales or leases of new or used motor vehicles.
