The District of Columbia Retirement Board uses the Aggregate Actuarial Cost Method, which does not result in the calculation of an unfunded accrued liability. GASB Statement No. 50 requires funds using the Aggregate Actuarial Cost Method to disclose funding status information based on Entry Age Normal calculations. Consistent with GASB Statement No. 50, the above Schedule of Funding Progress has been prepared using the Entry Age Actuarial Cost Method, to provide information that serves as a surrogate for the funded status and funding progress of the plan.

Actuarial Methods and Assumptions

**OTHER POST EMPLOYMENT BENEFITS (OPEB) PROGRAM**

As of September 30, 2013

Valuation Date	September 30, 2012 (projected from September 30, 2012 census)
Actuarial Cost Method	Entry Age Normal
Amortization Method	Level percent of pay, open
Remaining Amortization Period	30 years
Asset Valuation Method	Market Value
Actuarial Assumptions:	
Investment Rate of Return	7.00%
Discount Rate	7.00%
Rate of Salary Increases	3.75% (plus merit scale)
Rate of Medical Inflation	8.0% (pre-Medicare) or 6.5% (post-Medicare), grading to 4.00% over 70 years

The rate of employer contributions to the Plan is composed of the Normal Cost plus amortization of the Unfunded Actuarial Liability. The Normal Cost is a portion of the actuarial present value of plan benefits and expenses which is allocated to a valuation year by the actuarial cost method. The Actuarial Liability is that portion of the Present Value of Projected Benefits that will not be paid by Future Employer Normal Costs or active employee contributions. The difference between this liability and the funds accumulated as of the same date is the Unfunded Actuarial Liability.
